

# 微服务架构风格

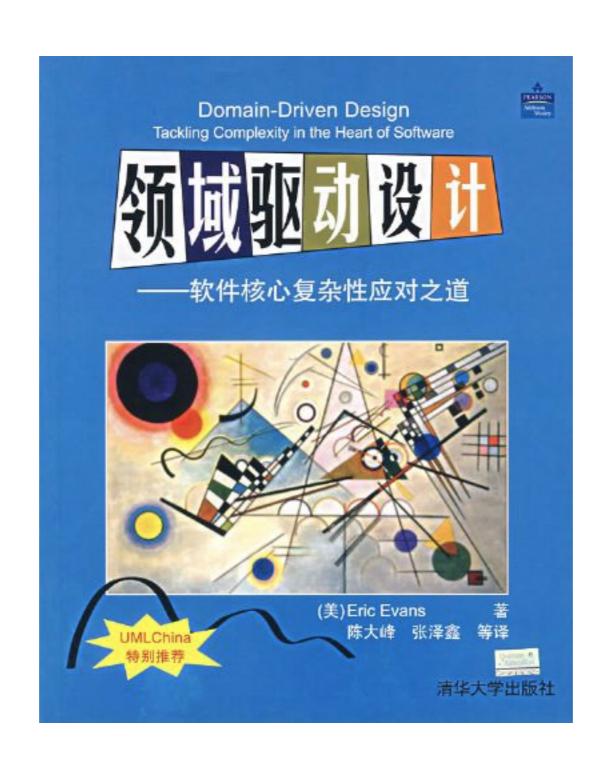

### 六边形架构

#### Bounded Context = 微服务

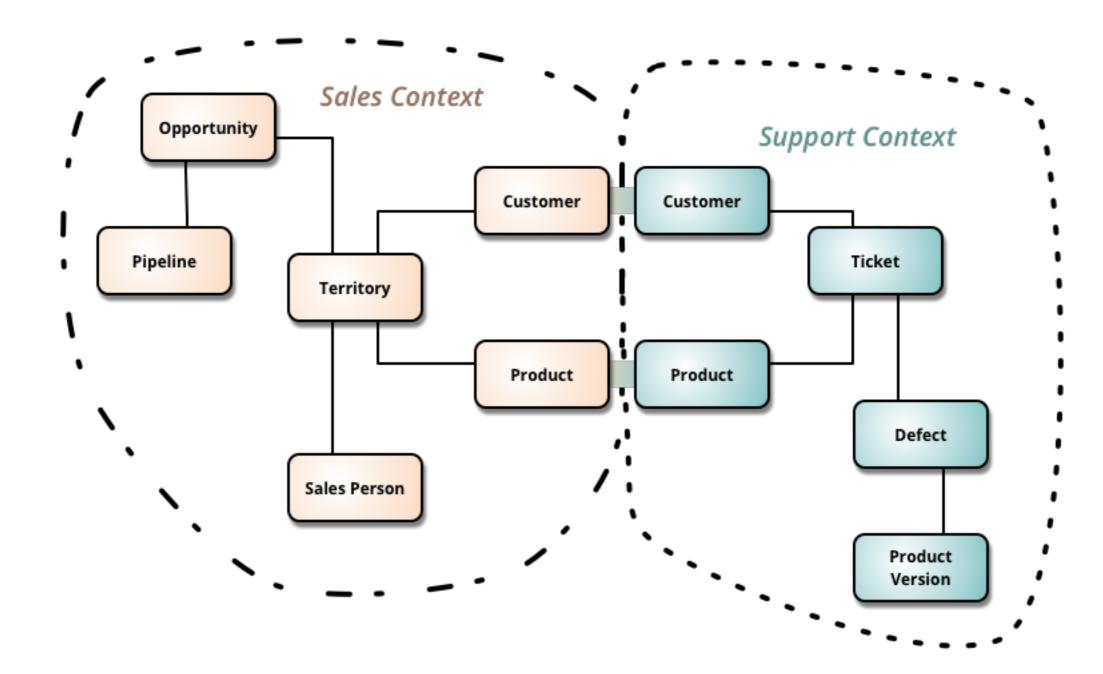

# 领域驱动设计

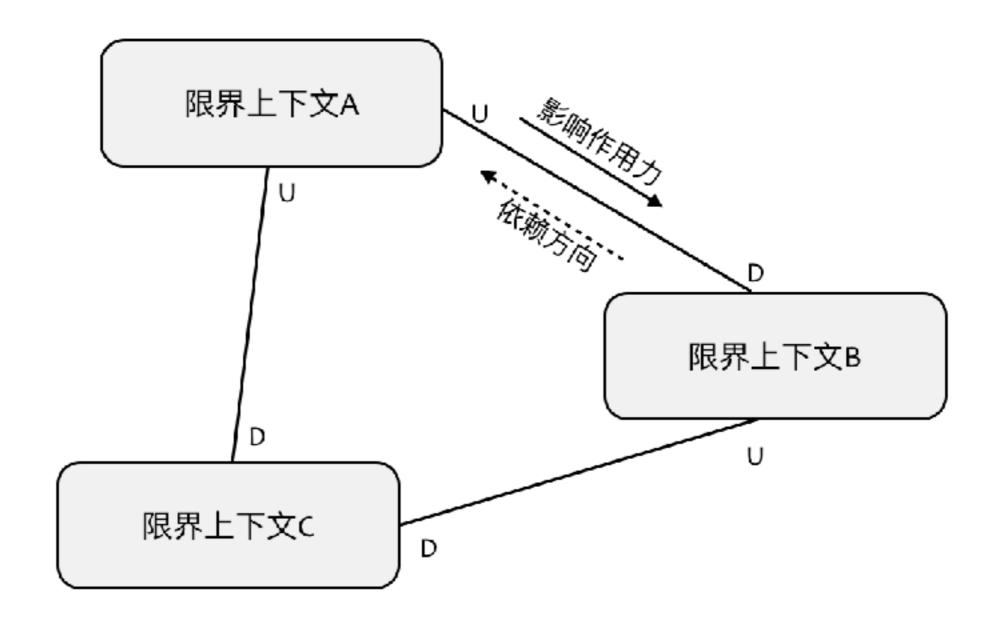

#### 领域驱动设计过程 开发团队与领域专家 问题域 统一语言 业务期望 战 略 D 设 限界上下文 限界上下文 限界上下文 计 改进限界上下文 的划分 寻找隐式概念 指导 战 设 重构 计 public class OrderService { 程序设计 改进代码质量 编码实现

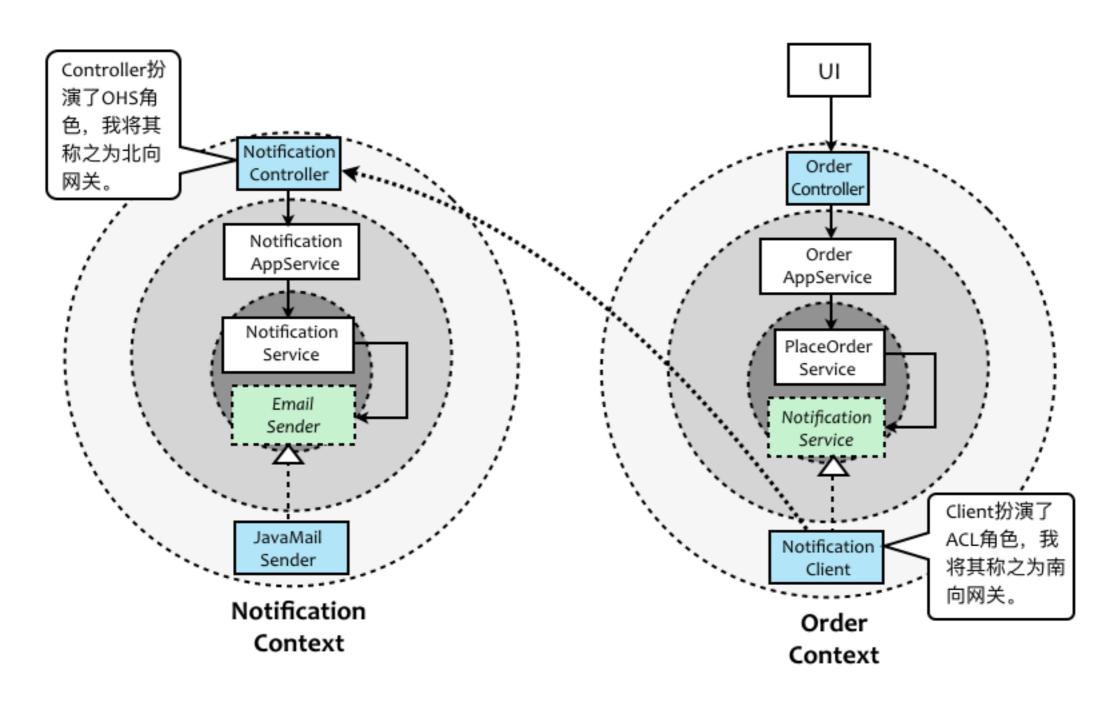

#### **Bounded Context**

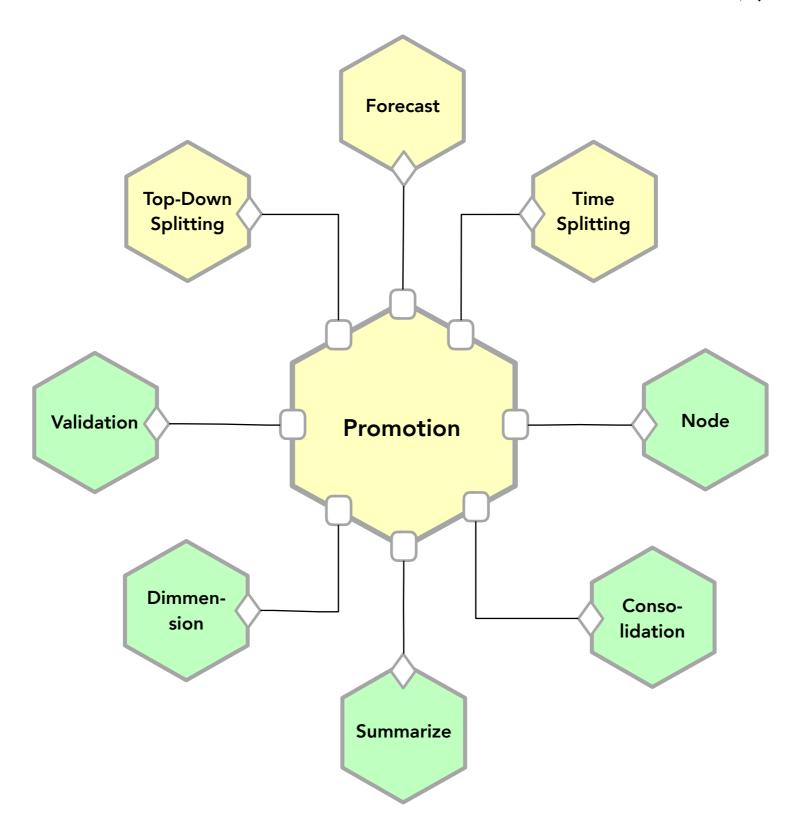

#### Context Map

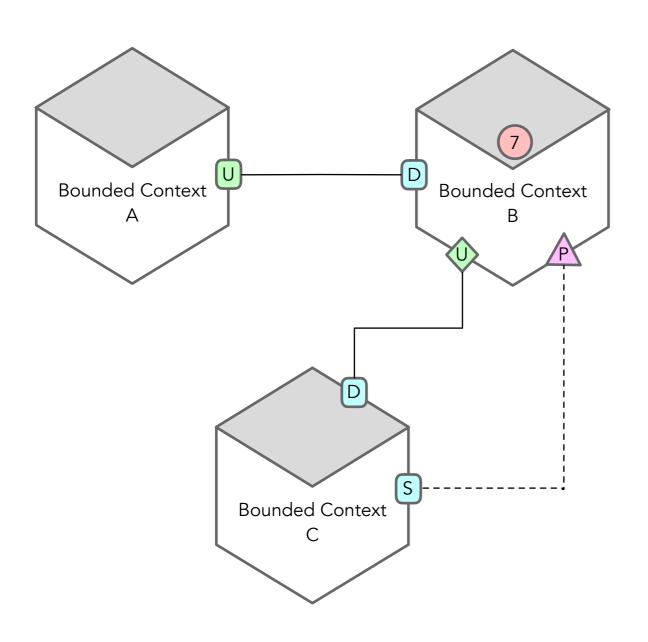

#### Context Map

#### Bounded Context = 六边形

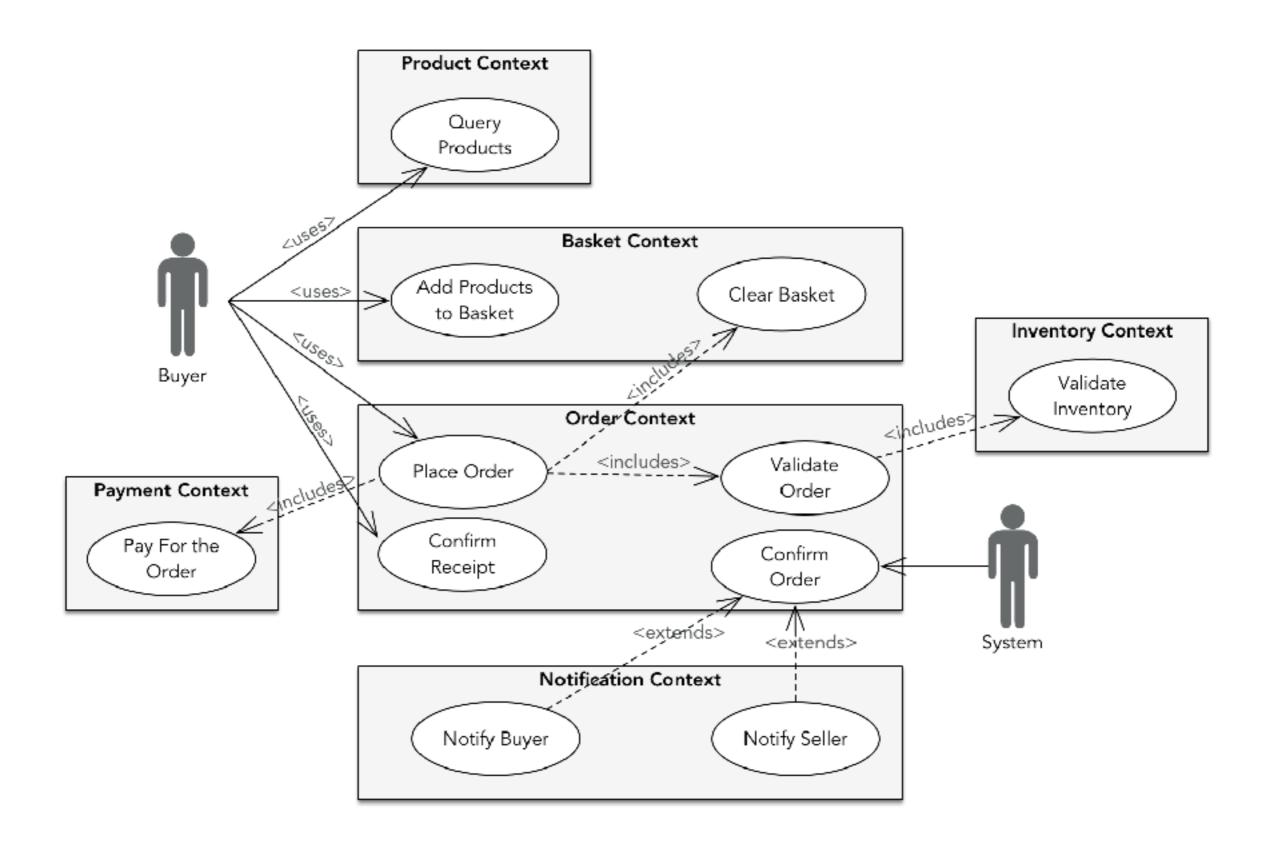

### 微服务的协作

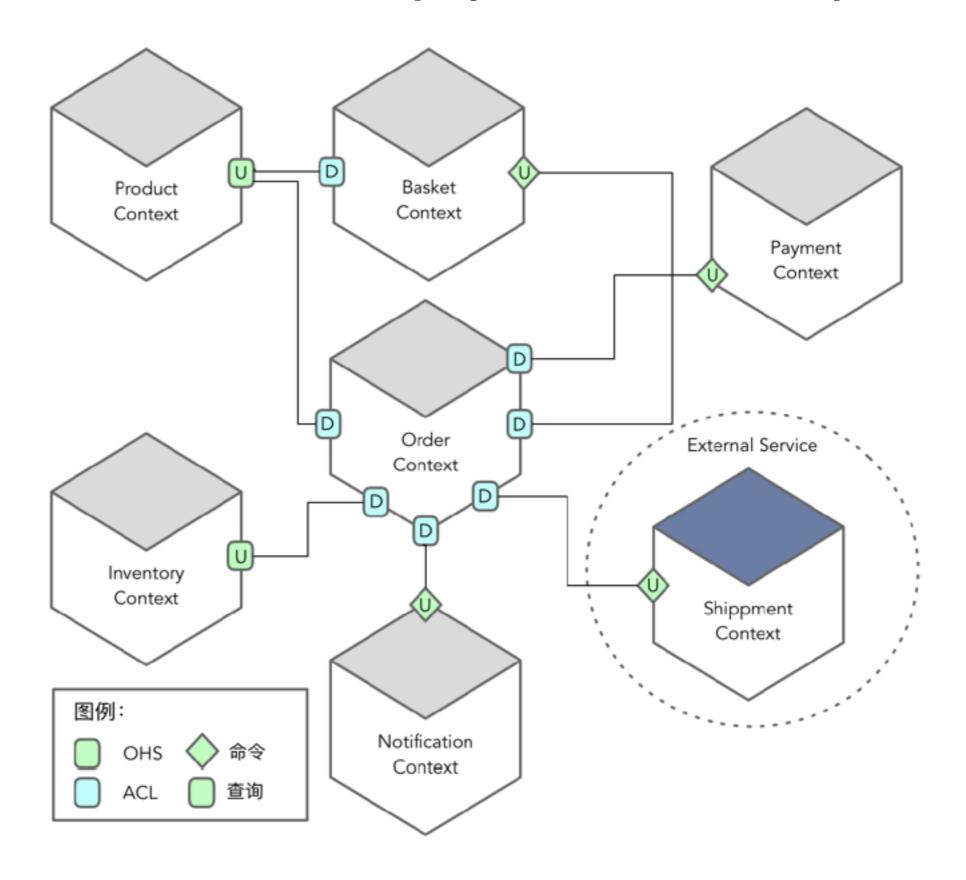

- 查询:一个请求,查看是否发生了什么事。重要的 是,查询操作没有副作用,它们不会改变系统的状态。
- △ 事件: 既是事实又是触发器,用通知的方式向外部表明 发生了某些事。

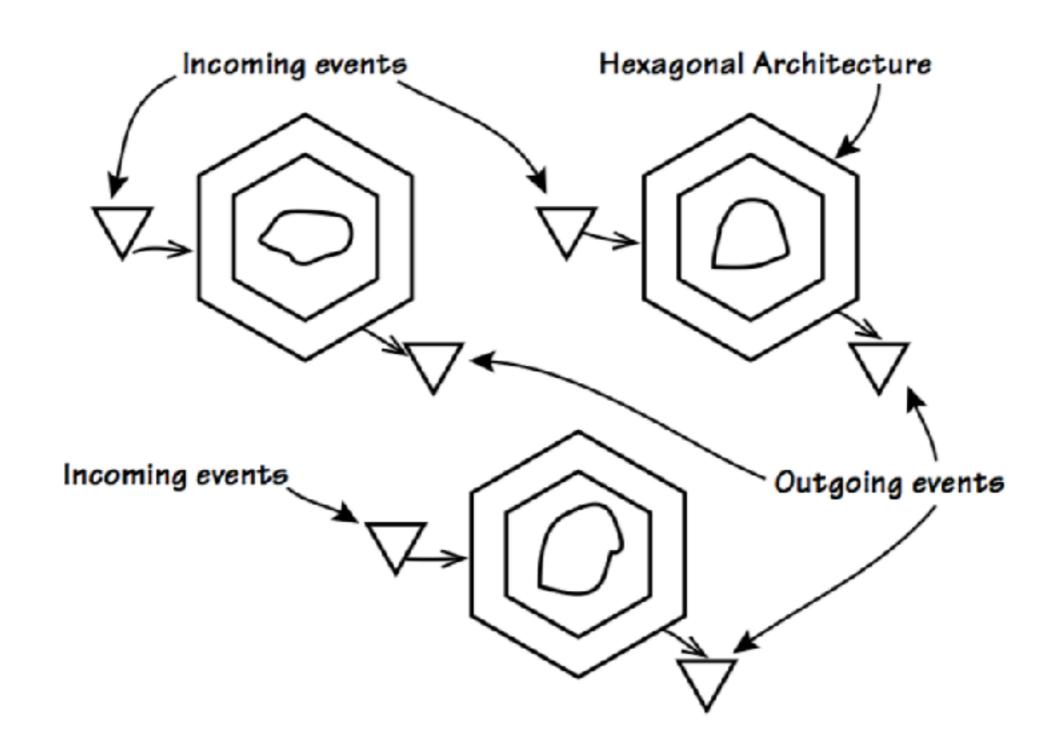

## 案例: 订单流程

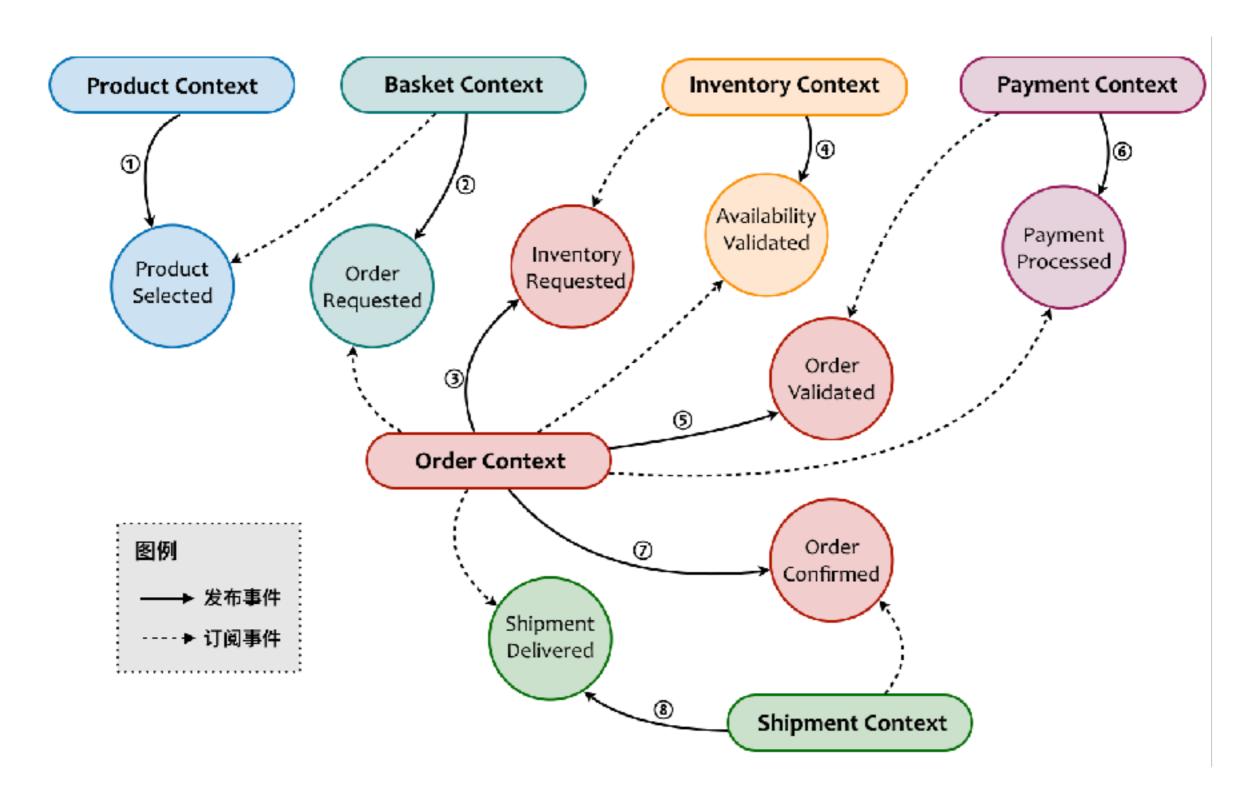

# OHS与ACL (命令和查询)

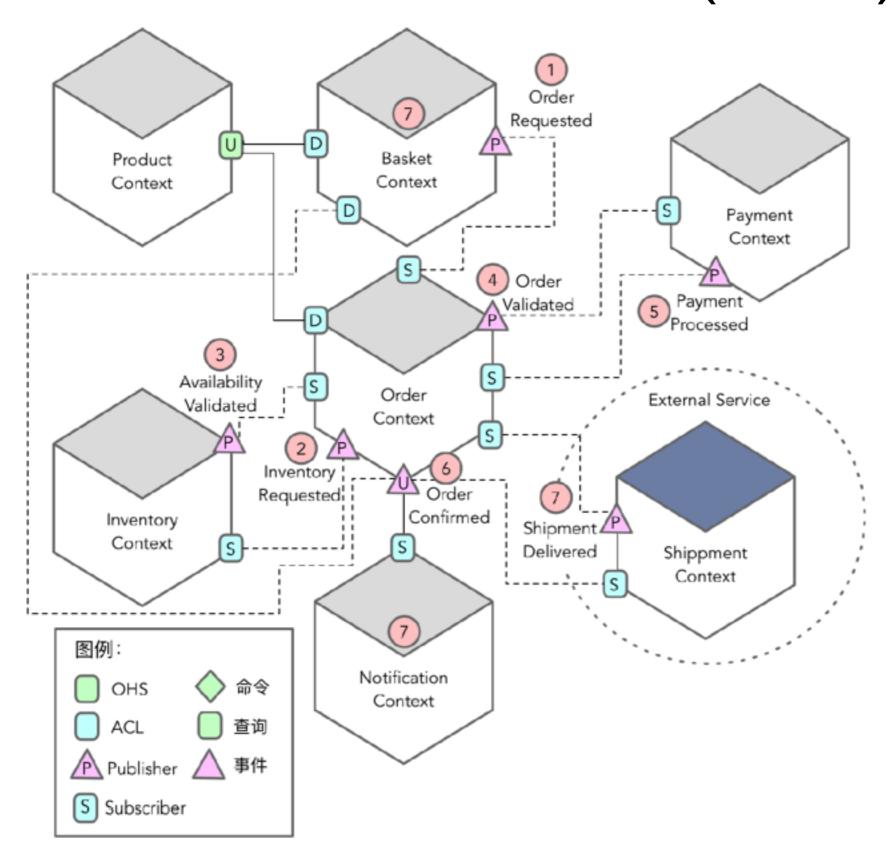

#### EDA-Event Driven Architecture

## 事件机制

# Publisher-Subscriber(事件)

# 谢谢!
